

JAVIER VARGAS

Co-Founder & CEO / CTO @ LogOS · Building local-first Industrial AI

Santiago, Chile | javier@bylogos.io | bylogos.io | linkedin.com/in/javierdvt

ABOUT

Co-Founder, CEO and CTO of LogOS, building local-first Industrial AI for Smart Energy and Infrastructure. Five years shipping software in real industrial environments — from PLC-adjacent firmware to edge-deployed AI and browser-native Digital Twins. Bet on the thesis that the next industrial software cycle runs at the edge, on open infrastructure, and answers to plant operators — not to the cloud.

EXPERIENCE

Co-Founder, CEO & CTO · LogOS

Mar 2025 – Present · Santiago, CL · Hybrid

Smart Energy & Infrastructure solutions for Industrial AI. Clients: RED Salud, UC Escuela de Ingeniería, JCurtis, TALES Elek, Molinera del Rey.

- Founded and lead LogOS as CEO and acting CTO — defining product, architecture, GTM and capital strategy for an Industrial AI company serving Smart Energy and Infrastructure operators.
- Built and deployed edge-native, local-first systems for industrial clients across healthcare, education, food and energy: RED Salud, UC Escuela de Ingeniería, JCurtis, TALES Elek and Molinera del Rey.
- Architected browser-based Digital Twin layer on Three.js / React Three Fiber — operators inspect plant state from any device, with no native app, no cloud dependency, and sub-second loop closure at the asset.
- Pushed an open-source-first stack (Cloud Native / Edge Native / Linux Foundation ecosystem) to keep deployments auditable, portable across customers, and free of vendor lock-in.
- Recruited and lead a multidisciplinary founding team; set engineering culture, hiring bar, and the technical roadmap from sensor data to AI inference at the edge.

Software Engineer · TALES Elek

Mar 2021 – Dec 2025 · 4 yr 10 mo · Santiago, CL · Hybrid

On-demand software development for industrial environments — embedded, edge and integration work for active plants.

- On-demand software engineer for an industrial automation firm — delivered embedded, edge and integration software for plants across the Santiago Metropolitan Region.
- Built IoT data pipelines and edge runtimes that survived real plant conditions: intermittent connectivity, legacy PLCs, and 24/7 operational constraints.
- Shipped operator-facing tooling and dashboards used in production — the field experience that became the design basis for LogOS.
- Five years of compounding context on what industrial customers actually buy, deploy and maintain.

Independent R&D Projects · Stealth Startup

Jun 2021 – Mar 2024 · 2 yr 10 mo · Hybrid

Self-directed exploration in edge computing and IIoT — the precursor stack to LogOS.

- Self-directed R&D across edge computing and IIoT — prototypes, learning sprints, and proof-of-concepts that fed into the LogOS thesis.
- Validated early hypotheses on local-first AI, on-device inference and lightweight industrial protocols before formalizing the company.

SELECTED AWARDS & RECOGNITION

- **1st Place — Human Enhancement Track, Platanus Hack 25** (Nov 2025). Built record.ai — an AI engine that bridges physical identity with digital presence using facial recognition and real-time web scraping to surface a person's professional background on contact.
- **NACE — Nueva Admisión Científicos y Emprendedores** (Jan 2025). Selected among the top 58 students at PUC School of Engineering for leadership, innovation, science and entrepreneurship.
- **Reconocimiento de Aporte — UNITE UC** (Nov 2025).
- **Escuela de Líderes UC** — PUC Facultad de Economía y Administración (Aug 2023).
- **Science Fair: AI Agents** — Colegio Tomás Moro (Oct 2022). Built an agentic voice AI with open computer vision on a Raspberry Pi 4 B+ — before ChatGPT existed.
- **Science Fair — Renewable Energy & Sustainable Cities** (Aug 2023) · **Science Fair — Magnetic Induction Generator, 3rd Place** (Universidad de Chile, Jul 2019).

EDUCATION

Computer Science Engineering · Pontificia Universidad Católica de Chile

Jan 2025 – Jan 2029 · Santiago, CL

Activities: NACE · UNITE UC · InnoBar · CCUC (Club de Cohetería Ursa Crux)

BUS-154 — Technical Program Management: Leading Teams and Delivering Results · Stanford Continuing Studies

Apr 2026 – May 2026 · Online

Business Leadership · Technical Project Management

Leadership School · Pontificia Universidad Católica de Chile

Aug 2023 · Santiago, CL

SKILLS

Domain

Industrial IoT (IIoT) · Edge Computing · Industrial AI · Physical AI · Digital Twins · Smart Energy & Infrastructure

Engineering Stack

Three.js / React Three Fiber · TypeScript / Node.js · Python · Linux · IoT data pipelines · Embedded & edge runtimes

Languages

Spanish — native · English — full professional · Portuguese — basic

Architecture

Local-first / Edge-native · Cloud Native & Linux Foundation ecosystem · Open-source-first · On-device inference

Leadership

Founding-team building · Engineering hiring & culture · Technical Program Management · Investor & customer narrative

Communities

JavaScript Chile · DevOpsDays Santiago · indies.la · UNITE UC · Club de Cohetería Ursa Crux

LEADERSHIP & COMMUNITY

- **UNITE UC** — Finance Coordinator (Mar 2026 – Present) · Development Team (Mar 2025 – Dec 2025).
- **Club de Cohetería Ursa Crux (CCUC)** — Digital Systems (Apr 2026 – Present). University rocketry club.
- **indies.la** — Volunteer (Nov 2025 – Present). Latin American indie founder community.
- **JavaScript Chile** — Volunteer (2025). · **DevOpsDays Santiago de Chile** — Volunteer (Jul 2025).
